

1. Click on Manage Extensions.

2. Toggle on Developers Mode at top right.

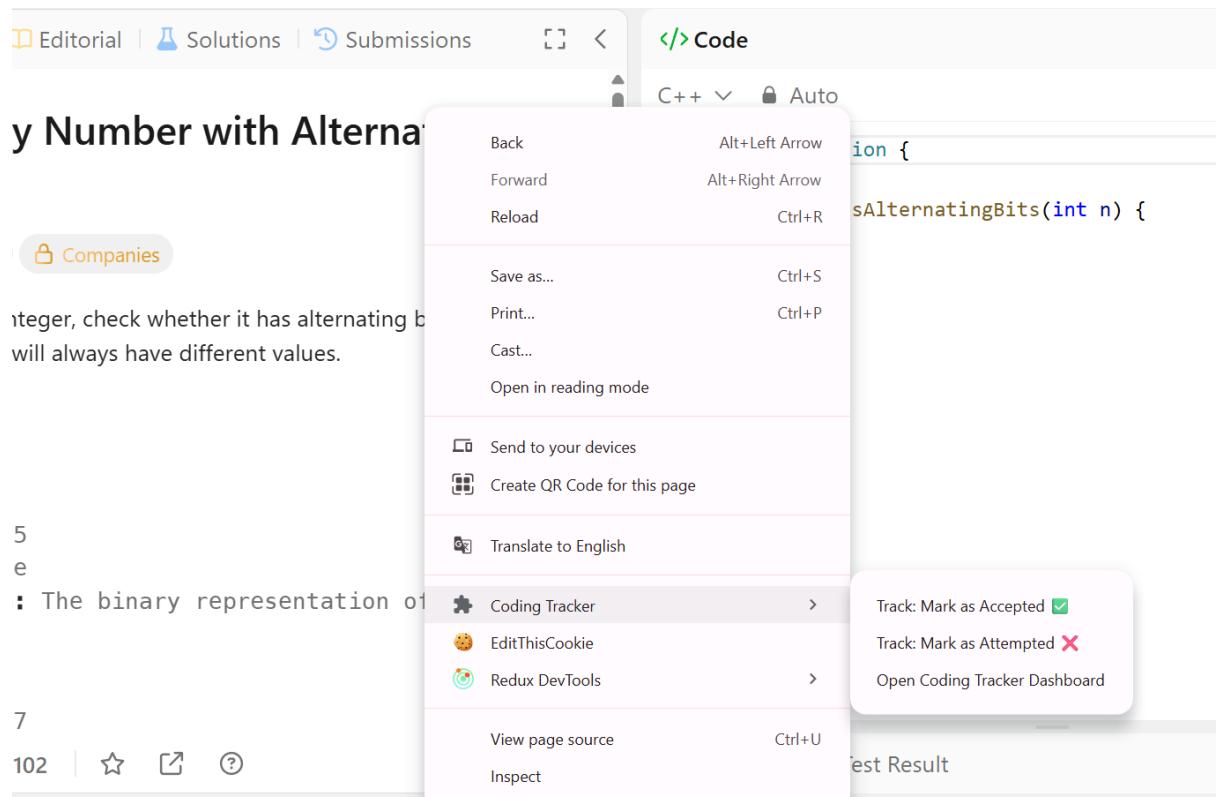

3. Click on Load Unpacked on top left.

4. Add this folder . In my case it is Extension written.

A screenshot of the Chrome Extensions page. The title bar says "Extensions". There are buttons for "Load unpacked", "Pack extension", and "Update". Below that is a "My extensions" section with a "Keyboard shortcuts" link. A note says "Your browser is managed by your organization". The main area is titled "All Extensions" and shows two installed extensions: "Coding Tracker 1.0.0" and "ColorZilla 4.1". Each extension card has a thumbnail, name, description, ID, and "Details" and "Remove" buttons. The "Coding Tracker" card also has a toggle switch. On the far right, there's a vertical scrollbar.

5. Extension will come. Now you can use.
6. Open any page. Here I open LeetCode and right click on it.

7. Mark what you want and when you want to open next time stats right click and see open coding tracker dashboard.

1. You only need to download zip and do these steps.
